Post on: 2007-09-10

LOS ANGELES (Internet Telephony Conference, September 10, 2007) – VoSKY, the leading provider of Skype for business solutions, today announced the upcoming release of VoSKY Exchange Pro, a turnkey PBX-to-Skype appliance that enables businesses to enhance communications and reduce telecom costs. The new edition will simplify installation, save rack space and expedite troubleshooting by integrating software and hardware into a standalone 1U rackmount appliance.

VoSKY Exchange Pro will come pre-loaded with Skype, the software that drives the world ' s largest VoIP network, as well as the VoSKY Exchange application required to deploy, run and manage the Exchange solution for Skype-enabling office phones.

VoSKY Exchange Pro is scheduled to ship in the fourth quarter in two eight-port FXS and FXO models that support eight Skype or SkypeOut lines on a single box. The VoSKY Pro VIO8 FXO PBX-to-Skype appliance will connect to any TDM or IP PBX through FXS station ports, while the VIS8 FXS PBX-to-Skype appliance will connect through FXO trunk ports.

“ VoSKY Exchange Pro is a true plug-and-play solution for Skype-enabling the PBX. Connect it to the appropriate ports on a PBX/KTS, and the only other thing you need to do to get started is to sign up for a Skype account, ” said David Tang, Vice President of Global Marketing for VoSKY. “ It ' s a strong addition to our VoSKY Exchange product line that provides businesses and resellers with a new option that will help streamline the deployment and maintenance process. ”

VoSKY Exchange is a family of VoIP gateways that optimizes Skype for use in a business environment by allowing users to make and receive free and low-cost Skype calls over their desk phones without PCs or headsets. The gateways install on existing PBXs, allowing businesses to take advantage of Internet telephony without replacing their legacy infrastructure. They also centralize Skype provisioning and management, giving IT managers and network administrators full control over Skype use while eliminating the need to install Skype on each desktop.

The Exchange platform maximizes VoIP savings by enabling free calling between company offices in different cities and/or countries, free inbound calls to the PBX from remote or mobile users calling from their Skype-enabled PCs, free Web Click-to-Call for customers calling from corporate websites, and low-cost long distance and international calls from the PBX to outside phones. Calls between Exchange-equipped offices and to other Skype users are free, while calls to traditional phones are charged at SkypeOut rates as low as 2 cents per minute -- even overseas.

VoSKY Exchange is the only enterprise-grade PBX-to-Skype gateway that has earned Skype certification, ensuring seamless interoperability with Skype features and services. The new edition will be demonstrated at the Internet Telephony Conference that opens today in Los Angeles. Small and mid-sized businesses and resellers can find out more about VoSKY and see a demo of VoSKY

Exchange Pro at the VoSKY seminar to be held at 2 pm on Tuesday, September 11, in meeting room 507.

About VoSKY

VoSKY is a leading developer of innovative solutions that simplify and enhance the use of Skype, the world ' s largest Voice over Internet Protocol (VoIP) network. The company's flagship product is VoSKY Exchange, a family of enterprise-grade VoIP gateways that allow companies to optimize Skype for the business environment. VoSKY Exchange VoIP gateways seamlessly integrate with existing PBX phone systems and enable business-class applications that help businesses reduce communications costs and improve productivity. VoSKY's product line also includes cost-effective consumer VoIP devices for using Skype on any traditional handset, mobile phone, or speakerphone. All VoSKY products have received Skype certification. With distribution in over 20 countries, VoSKY ' s principal office is located in Sunnyvale, CA, and maintains branch offices in Colorado Springs, CO; Basingstoke, United Kingdom; Beijing, China; Bogota, Colombia; Shanghai, China; and Taipei, Taiwan.
